[Monitor Keywords](#)

[Brief Patent Description](#) - [Full Patent Description](#) - [Patent](#)

1. A data retrieval method comprising: receiving a query set of keywords and at least one desired document resp association level; and searching for at least a group of d comprises the set of keywords, whereas each document not comprise the set of keywords; and whereas an assoc between the documents of the groups corresponds to the desired association level.

2. The method of claim 1 further comprising a stage of document keyword association parameters and inter-key parameters.

3. The method of claim 2 wherein a document responsive association level between keywords within the group of responsive to inter-keyword association parameters associated keywords and to document keyword association parameters with said keywords and documents.
4. The method of claim 2 wherein the stage of defining includes users inputs.
5. The method of claim 1 further comprising a stage of performing location based proximity search.
6. The method of claim 1 further comprising providing a search result representative of the documents within a document group.
8. A data retrieval method comprising: receiving a search query comprising a set of keywords and at least one desired document keyword association level; searching at least one document comprising all the set of keywords; and searching for at least one document that comprises the set of keywords, whereas the group does not comprise the set of keywords; and with a document responsive keyword association level between keywords within each group corresponds to the at least one desired level.
9. The method of claim 8 further comprising a stage of defining document keyword association parameters and inter-keyword association parameters.
10. The method of claim 9 wherein a document responsive association level between keywords within the group of responsive to inter-keyword association parameters associated keywords and to document keyword association parameters with said keywords and documents.
11. The method of claim 10 wherein the stage of defining includes users inputs.
12. The method of claim 8 further comprising a stage of

location based proximity search.

13. The method of claim 8 further comprising providing

14. The method of claim 13 wherein the search result in information representative of the documents within a do
